GLUEING SACHETS/SAMPLES

Dimensions and weight:

Minimum dimension: 50mm W x 70 mm H / 70mm W x 50mm H

Maximum weight: 25 gramme

Maximum dimension: 100mm W x 150mm H

Content / cm²: 0,15 ml

Maximum thickness: 3mm

Positioning:

Sachets can be glued within the shaded area (see drawing above)

Positioning requires a tolerance of 10 mm from the standard specified location, both in height and in width. There can only be glued on the first page of a section.

Comment concerning the positioning of a flatspray:

When multiple flatsprays are present in one edition, the flatsprays will be repositioned accordingly to avoid local thickening of the magazine.

Further specifications:

The sealed edges of the sachet must be 5 mm wide and must be able to resist a pressure of approx 2000 kg.

The sachet must be as flat as possible, especially the sealed edges i.e. the content of the sachet must be equally divided on the total surface.

The sachet must be flexibel and resist the temperature of 100°C (Hotmelt).

Packaging:

The sachets must be delivered upright in boxes with approximately 500 sachets.

All sachets should be placed in the boxes in the same direction. The different rows must be divided with a divider that is 10 mm higher than the sachets (to provide the sealed edges to be deformed).

Please use well manageable boxes, also at least 10 mm higher than the sachets.
